

Transforming landscapes

Participatory research for resilient land use in Europe

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement 862993.

What is AGROMIX

AGROMIX is a research and innovation project that focuses on the transition towards resilient farming, efficient land use, and sustainable agricultural value chains in Europe. 28 partners organisations from across the region are working with farmers and land managers to create practical tools and policy recommendations that will support farmers in the transition from conventional agriculture to mixed farming and agroforestry methods.

Knowledge Hubs

Platform for the sharing and storing of knowledge and project results.

Innovative Co-design

Co-design practices applied to research and field projects.

Sustainable Business Models & Tools

Effective capitalisation of agroforestry for farmers and stakeholders throughout the production chain.

Immersive Learning Tools

Virtual tools (serious games) that teach about applying the notions of agroforestry to one's own project.

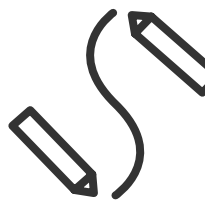

Policy Recommendations

For environmental resilience strategies and stable farming socio-economic value chains.

In the Field

AGROMIX's research comes from on-the-ground experience working with farmers on 12 pilot projects, from three agro-climatic zones across Europe. By supporting farmers to maximise the environmental benefits in their systems, AGROMIX aims to increase the landscapes' resilience to climate change.

Transforming Landscapes

We focus on

Physical landscapes

We co-develop practical tools with farmers, allowing them to transition towards more resilient land use.

Socio-economic landscapes

Diversifying production stabilizes farmers' income, and generates employment opportunities in rural areas.

Cultural landscapes

Adopting traditional approached influences our relationship with nature, preserving cultural legacies.

Policy landscapes

We provide recommendations to decision makers, creating frameworks that facilitate the transition towards resilient land use.

Expected Outcomes

Secure
natural capital

Promote
landscape
complexity

Conserve
biodiversity

Mitigate climate
change effects

Improve
water resource
management

Protect and enrich
agricultural soils
